

RED RIVER AUTHORITY OF TEXAS

WATER USE CURTAILMENT ORDER ALERT – STAGE 1 TRUSCOTT-GILLILAND WATER SYSTEM August 29, 2011

Due to the ongoing drought, the current water demand being experienced by the Truscott-Gilliland Water System is meeting and/or exceeding the system's capabilities to provide adequate service. Primarily, water use demand is more than the existing distribution system can handle. Therefore, the Authority is implementing its **Stage 1 Water Use Curtailment Order** in accordance with its Drought Contingency Plan.

The following **Water Use Restrictions** are in effect immediately and will remain in effect until further notice:

1. **No outside watering is allowed.**
2. **No washing of vehicles, boats, RV's, or driveways is allowed.**
3. **Customers with livestock tubs must maintain the float systems in good repair to alleviate any overflow.**
4. **No filling of Swimming pools.**
5. **All commercial and other known high water users are asked to reduce usage by 30% and prevent waste.**
6. **Watch for leaks and notify Authority personnel immediately if one is found.**

Authority personnel will be monitoring usage and assisting customers in complying with the restrictions. However, after September 9, 2011, violators of the restrictions will be subject to a temporary severance of connection and a \$50.00 fine for reinstatement.

In order for the system to provide the water required to meet the most critical needs, the Authority respectfully requests your full cooperation and assistance in this matter. A notice describing less stringent restrictions and/or termination of same will be issued once the water use demand reaches a more normal level, alleviating the need for the Water Use Curtailment Order. However, should conditions worsen, more stringent restrictions could be placed into effect.

The current drought conditions are impacting water systems all across the State of Texas to a point where the Governor's Office has requested the Texas Commission on Environmental Quality (TCEQ) to contact all Public Water Suppliers and ask that they implement their individual Drought Contingency Plans, regardless of whether they are experiencing difficulties meeting their demands or not. For more information on the statewide drought conditions, please refer to the TCEQ's website at www.tceq.texas.gov/response/drought.

Should you require further information on the water restrictions or have any questions, please contact the Authority's main office at (866) 723-8697.
